

PRIME STANDARD SEALER

PRIME EXPOSURE STANDARD SEALER WILL ENHANCE THE COLOUR OF YOUR DECORATIVE CONCRETE, DESIGNED FOR ENDURING PERFORMANCE AND TIMELESS APPEAL

PRIME SEALER RANGE

KEY TIPS FOR APPLYING STANDARD SEALER

Before applying Prime Standard Sealer, pressure clean the surface thoroughly. Ensure the concrete surface is completely dry and free from any contaminants such as grease, oil, or dirt. The presence of moisture can cause the sealer to appear white or cloudy, reduce surface adhesion, and result in delamination.

Always test Prime Standard Sealer on a small, inconspicuous area first to confirm surface compatibility and ensure it delivers the desired finish.

To ensure proper surface penetration:

- Ensure that the surface to be sealed is moisture free.
- Dilute the first coat of Prime Standard Sealer with Prime Xylene Blend at a ratio of 20–30%.
- Note: Dilution is not essential for exposed aggregate or porous surfaces.
- Do not allow the product to pool - excessive application can cause blistering or bubbling.
- Allow 3-4 hours for the first coat to dry (weather dependant).
- Apply a second coat undiluted.

Recommended Application Tools:

- Use a Prime 10–20mm nap roller for smooth or low-porosity surfaces.
- Use a Prime 25mm nap roller for rough or porous surfaces such as exposed aggregate.

Areas may become slippery when sealed, consult your Prime Exposure stockist about using our Anti-Slip (glass beads).

Important: Allow the sealed surface to cure thoroughly. Do not drive on the sealed surface for 5-7 days to ensure full resin hardening.

PRIME EXPOSURE SEALERS

PRIME ONE COAT SEALER

Prime Exposure One Coat Sealer has been specifically designed to save time and money whilst delivering the same results as a two coat process.

PRIME SAME DAY SEALER

Prime Same Day Sealer is ready to use and can be applied directly to green curing concrete. It retains a wet/semi-gloss appearance. The perfect sealer to keep your project on the move.
